

Partner Portal

HubSpot integration and sales support

CTO discussion draft 4
7 October 2026

Reviewed priorities

Priority	Outcome
1 HubSpot integration	Home, Opportunities and findable Resources
2 Marketplace	Products we sell and 30-day proposals in HubSpot
3 AI Sales Support	Mandatory agent available across all active pages
4 Deferred	Site Designer with multisite, and Discovery

Site Designer and Discovery will not be initialized now.

Portal experience and ownership

Surface	Source and responsibility
Home	HubSpot partner, sales, leads, promotions and customers
Opportunities	HubSpot opportunities, prices, BOMs and proposals
Marketplace	Authorized products and quantities for a proposal
Resources	Findable HubSpot files, including battle cards
AI Sales Support	Persistent support control with authorized page context

Home aggregates opportunities. Each view enforces partner and customer grants.

Priority 1: HubSpot integration

Work to define first	Evidence required
Account and field mapping	Actual objects, subscriptions, APIs, associations and owners
Partner access	Scoped reads, aggregates, files and opportunity permissions
Home and Resources	Metric definitions, freshness, taxonomy and private downloads
Recovery and operations	Reconciliation, revoked access, operator and restore evidence

The integration specification and permission map precede UI implementation.

Marketplace options for this scope

Option	Fit / tradeoff	Proposed position
Thin portal + HubSpot	Small catalog and proposal integration to own	Leading option if account fit passes
Medusa + HubSpot	Reusable catalog tools with added software and mapping	Conditional on catalog gaps
CloudBlue / broader commerce	Wider distribution and subscription scope	Park unless a required gap appears

This Marketplace generates proposals. It has no checkout or direct sales.

Proposal storage and authority options

Route	Required proof	Position
Native HubSpot quoting	Full BOM, prices, versions, approval and expiry	First route to evaluate
Supported HubSpot record / artifact	Structured BOM and revision history, beyond a link	Conditional fallback
QuoteWerks / other CPQ	Specific fit failure that justifies another authority	Escalation option only

One price authority. Every accepted route preserves the proposal and BOM in HubSpot.

Thirty-day proposal lifecycle

Step	Required behavior
Select and review	Canonical products, quantities, exact price and BOM
Approve and persist	Bind exact revision and verify complete HubSpot storage
Issue with 30-day validity	Same expiry in document, portal and HubSpot
Expire or renew	Old revision stops being current; renewal creates a new version

The 30-day requirement is fixed. Issuance clock and price-honoring policy need agreement.

AI Sales Support options

Option	Benefit	Responsibility / tradeoff
Managed inference + owned agent	Avoid operating model-serving capacity	Verify model terms, privacy, region and usage cost
Self-hosted model + owned agent	More deployment and model control	Own capacity, security, model rights and on-call

Both require governed CRM, catalog and Resources tools. No separate AI menu.

Delivery and first-use gates

Increment	Acceptance
Priority 1: HubSpot	Scoped Home, Opportunities and human Resources journey
Priority 2: Marketplace	Verified price/BOM persistence and 30-day proposal controls
Priority 3: Agent	Support across every active page with safe context and tools
Priority 4: Later decision	Site Designer and Discovery await explicit reactivation

The initial priorities 1–3 release includes the mandatory agent.

Deferred capabilities and scope limits

Capability	Future scope
Site Designer	Site/floor design with multisite profiles and overrides
Discovery	All observable items on authorized network segments
Discovery coverage	Document unknown, unreachable or unsupported devices
Current boundary	No scaffolding, collectors, accounts or vendor trials now

Import-only assessment does not fulfill the future network discovery objective.

Evidence and cost before selection

Decision	Inputs still missing
HubSpot and catalog fit	Account capabilities, product/price source and field owners
Commercial policy	Approval, 30-day clock, tax/currency and price honoring
Data and operations	Grants, lifecycle bounds, named support and recovery owners
Three-year cost	Build/integration, licenses, operations, stewardship and exit

Re-estimate the active scope. Previous staffing and calendar envelopes are superseded.

EA review and CTO decisions

EA review of the revised boundaries and presentation

Named owners and confirmed HubSpot integration inputs

Evidence-backed Marketplace and agent choices

Explicit approval of scope before implementation

No implementation, procurement or deployment approval is implied.
